DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-27 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. The claimed pixel growth curve, critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976).

Claim 1, lines 7-9 and claim 27, lines 8-10 recite "defining the pixel growth curve, such that a plurality of consecutively filled pixels form a cluster along the curve and such that pixels widely separately along the curve are also widely separated within the halftone cell"

However, each of the disclosed pixel growth curves include pixels that are widely separated along the curve but close together within the halftone cell. For example, in Figure 1 (reproduced below with additional labels (A) through (D)), the pixels in widely separated positions along the pixel growth

curve (e.g. 2nd (A) and 9th (B) positions, the 3rd (C) and 14th (D) positions) are adjacent within the halftone cell. Thus, it does not appear than the pixel growth curves recited in the claims are described in the disclosure.

**FIG. 1**

Allowable Subject Matter

3. Claims 1-27, insofar as they are understood, would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

4. The following is a statement of reasons for the indication of allowable subject matter:

The art of record does not teach or suggest the recited pixel growth curve such that a plurality of consecutively filled pixels form a cluster along the curve and such that pixels widely separately along the curve are also widely separated within the halftone cell.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Velho et al (each) and Ostromoukhov et al disclose examples of halftone pixel growth patterns.
